If Your Concrete's Not Protected, It's Wearing Down

Visionary Floors fixes cracks, stains, and worn concrete with a professional coating—giving you a floor that looks like a showroom.

Epoxy

Concrete degrades over time. Then you have to pay for a costly replacement.

Urethane

Urethane

Big-company quality without big-company pricing!

We deliver the same professional-grade epoxy and concrete coatings as national brands – without the inflated overhead.

Concrete Polishing

Concrete Polishing

We provide epoxy services in all cities in Colorado, including Denver, Thornton, Boulder, Westminster, Arvada, Longmont, and more!

Call Us at 720-742-6691

Services Provided

Services Provided

We offer a range of professional concrete flooring solutions in Colorado, from decorative finishes to industrial-grade surface preparation. Each service is designed to protect, enhance, or prepare concrete based on how the space is used.

Flooring Option	Best For	Appearance	Durability	Key Benefit
Epoxy Flooring	Garages, basements, commercial spaces	Smooth, clean, solid color	High	Seals and protects concrete from wear, stains, and moisture
Metallic Epoxy	Garages, showrooms, offices	High-gloss, marbled, decorative	High	One-of-a-kind, modern finish with durability
Urethane Flooring	Sun-exposed or high-traffic areas	Smooth, satin or gloss	Very High	Flexible, UV-resistant, resists cracking and yellowing
Polished Concrete	Retail, warehouses, modern interiors	Natural, glossy or matte	Very High	Long-lasting, low-maintenance finish using existing concrete

Why DIY epoxy usually doesn't work out (and the professionals get called later)

Why DIY epoxy usually doesn't work out (and the professionals get called later)

If you're thinking about DIY, here's maybe why you should reconsider.

1. Lack of Proper Preparation. Most DIY epoxy floors fail because the concrete isn't properly prepared. Cleaning and acid etching aren't enough—concrete needs mechanical grinding to create a strong bond. Without it, coatings sit on the surface and often peel or bubble within months.

2. The Epoxy isn't High-Quality.

DIY kits also use thinner, low-solids materials designed for convenience.

2. The Epoxy isn't High-Quality. DIY kits also use thinner, low-solids materials designed for convenience, not durability. Professional systems use industrial-grade coatings and multi-layer applications that chemically bond to the concrete. The difference is similar to wall paint versus an industrial floor coating.

3. Moisture is another common issue. Concrete naturally releases moisture, and if it isn't tested or managed, that moisture becomes trapped under the coating. This causes bubbling, lifting, or delamination—something most DIY kits don't account for.

Epoxy Services Fortify Your Flooring

What Epoxy Actually Does

- Seals the concrete surface
- Prevents moisture intrusion
- Stops dusting and erosion
- Protects against chemicals and abrasion
- Makes cleaning easy
- Improves lighting and appearance
